

TECHNICAL RIDER - LIGHTS

2012 TOUR

We bring

2 pieces of a 1m x 0.5m x 0.2m box with a built-in 1ch-dimmer and blinder (1kW) (the grey boxes in the pic below)

Both boxes can be controlled with the same DMX-adress.

We need

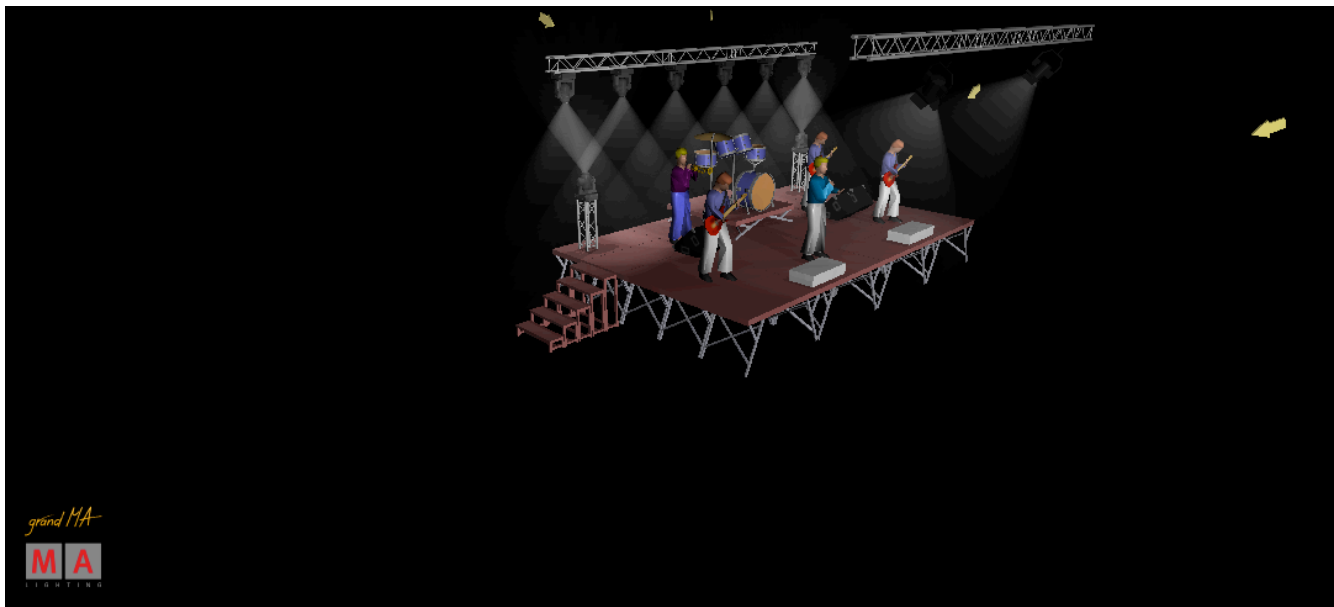

A kind and professional light operator.

Sometimes we bring our own light operator. (then GrandMA is preferred, Hog with local support only)

**The picture shows the typical GWF musician setup.
The lights are just an example.**

This is for promoters to have an example of a standard lights setup that works very well with GWF.
The purpose is to display the importance of the lighting system.

We wanna give the audience a great show, and this only possible with good sound and light systems!!!

We totally trust your local production company.
